1. Foreword

The Nordic insurance associations, SF/Insurance Sweden (Sweden), FFI/Finance Finland (Finland), Finance Norway (Norway) and Insurance & Pension Denmark (Denmark), have approved a joint system for registration of anti-intruder products applicable to burglary and theft insurance.

In Norway, Finance Norway is represented by FG Skadeteknikk (former FG Forsikringsselskapenes Godkjennelsesnevnd).

The aim of the scheme is to promote the intentions of the European Common Market to enable products "approved" in one European country also to be used in another European country.

The scheme described in this document applies, however, only to anti-intruder products registered by insurance associations in the Nordic countries.

A secondary purpose of the registration scheme is to ensure that insurers and their customers can readily access a list of many suitable anti-intruder products. It should be noted that insurers can stipulate the use of specific anti-intruder devices, and it is only the specific insurance contract that can specify which anti-intruder products may be used for individual security purposes.

The registration of a product can be withdrawn if any new knowledge or information gives reason to doubt the performance of the product.

Each Nordic country is responsible for its own system and registration terms.

Insurance Sweden has no product registration system, see section 5 and appendix 5.

This document is the original. In the event of any differences in interpretation of a translated version, the English version takes precedence.

2. Registration

A product can be registered according to the procedures of each organisation where applicable.

The following is minimum required documentation:

- A copy of a certificate ¹⁾ issued by an accredited certification body as specified below ²⁾
- User guide in the language of the country concerned.
- Installation instructions in the language of the country or in English – unless otherwise specified by the relevant insurance association.
- Where the applicant is a person other than the certificate holder, the certificate holder must provide a declaration in writing authorising the applicant to use the certificate in connection with registration of the product.

¹⁾ "SBSC Intyg" can be accepted by some insurance associations, see details in the following appendixes.

²⁾ Requirements to accreditation and certification bodies:

- Certification body conforming to quality standard EN/ISO/IEC 17065: 2012. The scope of the accreditation must cover relevant standards.
- An accreditation body in an EU/EEA member state must accredit the certification body.
- The accreditation body must be a member of European Accreditation (EA).

The certificate must comply with the following:

- The certificate must be in English.
- The certificate must have an expiry date
- Certification must be based on a test conducted in accordance with relevant performance specifications, valid at the time of application, and listed in Appendix 1.
- The certificate must include information showing which version of the performance specification it was issued under.
- The certificate must state which class or grade the product achieved under the relevant performance specifications.
- Documentation must be provided proving the attestation of the certification body and its authority to issue product certification. Documentation must be in English.

Any costs in connection with registration must be met by the applicant.

Costs differ in the various national insurance associations.

3. Registration period

Registration is limited in time to the period of validity stated on the certificate, subject to a maximum registration period of five years. Before expiry of the registration period, the applicant can apply for a new registration period by submitting a valid certificate. Such an application must be made to each of the Nordic insurance associations with whom it is wished to maintain the registration.

The registration of an anti-intruder product can be renewed repeatedly if the product or standard has not changed and the product continues to have a valid certificate

4. Discontinuation of performance specifications

In the event that performance specifications (product standard etc.) are no longer recognised in one of the individual national insurance associations, any registered products complying with these specifications can continue to be registered until expiry of the certificate, subject to a maximum period of five years.

In the event that a specific set of performance specifications ceases to be recognised or in the event of discontinuation of performance specifications, each Nordic insurance association can individually opt to continue to register the anti-intruder products concerned in accordance with pt. 3, Registration period.

Notice of withdrawal of approval of performance specifications will be published on the association's website or in the form of a notice from the body that issued the specifications.

5. Application for registration

Application for registration must be submitted to each of the Nordic insurance associations; details of the required procedure are given on their websites.

FFI, Finance Finland, www.vahingontorjunta.fi

FG Skadeteknikk, Norge, www.fgsikring.no

F&P, Forsikring & Pension, www.sikringsguiden.dk

Insurance Sweden approves products that are certified by an accredited certification body accredited to EN/ISO/IEC 17065 and accredited by SWEDAC or any other member of European Accreditation, EA.

6. Definitions

This document uses the following definitions:

Term	Definition
Accredited certification body	A certification body is an EU/EEA country which satisfies quality standard EN/ISO/IEC 17065: 2012 for product certification and is accredited by an accreditation body in an EU/EEA country under special legislation and is subject to the special control of the accreditation body.
Anti-intruder products	In the context of this document: products providing mechanical resistance to intrusion, e.g. locks, grilles, etc., and products for electronic monitoring, e.g. sensors and central equipment for automatic intruder-alarm systems.
Applicant	Producer, importer or seller of an anti-intruder product who wishes to have the product included on the insurance association's registration list.
CEN	The European organisation for national standards organisations – Comité Européen de Normalisation
CENELEC	The European organisation for national standards organisations in the electrotechnical field – Comité Européen de Normalisation Électrotechnique.
Certificate	Document issued by an accredited certification body confirming conformity with an EN or TS from CEN or CENELEC.
Document of conformity	A document other than a certificate, which confirms conformity with performance specifications.
Finance Finland/FFI	Finance Finland is a trade body, which represents financial companies. Main objective is to secure a benign operating environment, well-functioning financial market and effective payment system. FFI also promote loss prevention in addition to social welfare and safety. www.finanssiala.fi , www.vahingontorjunta.fi

Term**Definition**

Finance Norway

Finance Norway is the organisation representing the financial sector – banks, financial institutions and insurance companies – in Norway.

www.finansnorge.no,
www.fgsikring.no

F&P Godkendelsesblad

A former type of document of conformity, verifying tests and classification of mechanical anti-intruder products tested in accordance with F&P Denmark's Standard Thief Method. It is no longer valid for registration.

Insurance Sweden/SF

A joint organization for insurers who conduct insurance activities in Sweden. The organisation safeguards the interests of members and their opportunities for carrying on business in Sweden and abroad.

www.svenskforsakring.se

Insurance & Pension Denmark/F&P

The organization in Denmark representing insurers and cross-company pension funds.

www.forsikringogpension.dk,
www.sikringsguiden.dk

Interpretation sheet/IS

The CENELEC Interpretation Sheet (IS) is a published sheet giving the interpretation of a CENELEC standard. In principle, a CENELEC standard is written in such a way that there is no need for interpretation by the user. However, the parties involved in the use of the standards, such as manufacturers, certifiers and legislators, read standards from their own perception and do not always understand the intentions expressed by the standards. Therefore, the Technical Body responsible for the published standard asks CEN-CENELEC Management Center (CCMC) to issue, after due approval procedure, an Interpretation sheet, which purpose is to clarify the meaning or the intention of a specific part of the standard.

Term**Definition**

Performance specifications

Technical specifications stipulated by a requesting party – e.g. an insurance company – as a necessary condition of insurance.

or

Specification of technical properties for a product, e.g. a standard or other technical specification approved by one of the Nordic insurance associations, e.g. from Insurance Europe (former CEA), Insurance Sweden, Finance Norway, Finance Finland or Insurance & Pension Denmark.

See Appendix 1-5

Period of registration

The period during which a product can be registered without requiring renewal of registration and which can be a maximum of five (5) years subject to a maximum of the period shown in the certificate.

Product certification

Process under which an accredited certification body issues documentation to the effect that a product has been tested in accordance with and meets the requirements laid down in a defined product standard.

Registration scheme

The scheme described in this document.

Standard Thief Method (STM)

Forensic testing method to assess the intrusion resistance of mechanical anti-intruder products. The method was designed by Insurance & Pension Denmark. Stop for test: 31.12.2013 and stop for approval: 31.12.2015.

SSF Stöldskyddsföreningen

Swedish Theft Prevention Association publishes burglary protection norms on behalf of Swedish insurance.

Appendix 1: List of performance specifications for anti-intruder products

List of performance specifications for anti-intruder products, stating which specifications are approved by the individual insurance association.

Dated references are subject to current and subsequent versions of the standards mentioned.

Automatic intruder alarms (AIA):

European product standards (EN) and Technical specifications (TS) published by CENELEC including interpretation sheets (IS) and amendments (A), norms published by SSF.

Note: An approval requires additional integrated module for wire free communication according to EN 50131-5-3.						

Water:

Product requirements for water leak detection and shut-off:

FG Skadeteknikk, Norway

Specification	Title	Note	Recognised by:			
						
FG 600:2 (01.12.2015)	Water leak detection and automatic shut-off		-	-	x	-

Appendix 4: Denmark

Testing after the Standard Thief Method/Standardtyvmetoden (STM) stopped the 31st of December 2013. Products tested according to STM has not been recognised after the 31st of December 2015.

The connection between classification according to the Standard thief method, YELLOW/GUL, GREEN/GRØN, BLUE/BLÅ and RED/RØD, sikringsniveau/security level and requirement to the complete lock unit/låseenhed are shown in the table below.

Security level/ Sikringsniveau	Classification – STM (Withdrawn)	New designation
10	-	Lock unit/låseenhed I
20	GREEN/GRØN	Lock unit/låseenhed I
30	BLUE/BLÅ	Lock unit/låseenhed II
40	BLUE/BLÅ	Lock unit/låseenhed III
50	BLUE/BLÅ	Lock unit/låseenhed IV
60	RED/RØD	Lock unit/låseenhed IV
